

INGAL EPS CASE STUDY

Sustainability solutions from Sustainability Professionals

 **Objectives**

- INGAL EPS were seeking world class sustainability support for machinery risk assessment, visual management procedures, quality management system development and finally occupational hygiene support.

 **Challenges**

- Transition period between hiring a new safety professional was needed to be covered.
- Expert Occupational hygiene advice around noise was needed

 **Solutions found**

- Machinery risk assessment development
- Quality visual management procedures with tolerances created.
- Best practice noise survey deployed with detailed report with recommendations
- Chemical handling and spill online course developed onsite.

**OUR BENEFITS**

**Benefits One**

Supplier quality performance increases via deployment of better procedures

**Benefits Two**

Reduction in occupational noise levels via understanding and tools to reduce

**Benefits Three**

Support on demand for projects and for covering skill and labour shortage

You3 provided us with a very professional report and recommendations for the noise survey and testing work we requested. The work was targeted, informative and carried out effectively particularly when consulting with the work force and Leadership team. Thank you.
